

# MEDITECH's Nursing Solutions

The best care. Humanly possible.

The screenshot displays the Expanse Patient Care EHR interface for a patient named Robert Edwards. The interface is organized into several sections: **Summary** (top left), **Personal Notes** (middle left), **Patient Demographics** (bottom left), **Lab Results: Last Value** (bottom left), **My Widget** (middle right), **Vital Signs** (bottom right), and **Current Visit Medications** (bottom right). The patient's name and ID are visible at the top right. The **My Widget** section shows vital signs such as Blood Pressure (110/90), Temperature (36.7 C), Pulse Oximetry (97), WBC (8.0 K/mm3), Potassium (3.4 mEq/L L), Glucose (110 mg/dL), and Electrocardiogram (08/23/16). The **Vital Signs** section shows BP (130/86 M), Pulse (80), Resp (17), Temp (36.7 C), and O2 Sat (97). The **Lab Results** section shows Hematology results for WBC, RBC, Hgb, and Hct. The **Current Visit Medications** section shows 'Tb Test' with a note 'each MC AD ONE'.

Expanse Patient Care

Give your nurses and therapists the freedom to do their jobs on the move, with Expanse Patient Care.

Convenient, web-based tools provide full, mobile access to the enterprise-wide EHR, as well as a unified user experience and clinical decision support.

The best part? Expanse Patient Care keeps clinicians focused on their patients, not their technology.

## More Face-to-Face Time

With Expanse's Point of Care functionality, nurses and therapists can easily document right from the patient's bedside. Benefits include:

- A mobile, modern solution with intuitive navigation
- Easy-to-use, flexible documentation tools
- A convenient, reliable option that fits in their pocket
- Frictionless interactions with patients
- Access to patient information, whenever and wherever they need it.

## Stay Safe through Surveillance

Surveillance boards and notifications flag for patients at risk for sepsis, falls, and other hospital-acquired conditions.

## See the Whole Operation

Track and manage readmissions, HACs, turnaround times, surgical throughput, time to prepare room, average outpatient visits, and much more to keep your department running like a well-oiled machine.

## Support Mom and Baby

Life's most important transition of care occurs the moment a baby enters the world. With MEDITECH's Expanse Labor and Delivery solution, nurses can keep this transition safe and seamless, from the start of labor through postpartum care.

## What Customers Are Saying about Expanse Patient Care

### “ QUICK, QUIET CARE

“With the increased mobility of Expanse on a handheld device, nurses can slip into a room and administer medication in under a minute, saving time and barely interrupting a recovering patient.”

#### **Jureza Moselina**

MSN/INF, BSN, RN Director of Clinical Informatics  
Val Verde Regional Medical Center

### “ MOBILITY THAT PAYS FOR ITSELF

“Moving to a web-based solution like Expanse enabled us to reduce our 3rd party network licensing costs by over two-thirds. That’s more than \$40,000 in annual savings — which is expected to go up as we eliminate additional servers.”

#### **Carl Smith**

Chief Information Officer  
King’s Daughters Medical Center

### “ INTUITIVE NURSING

“We are seeing more nursing engagement than we ever had before. Expanse’s user interface is aligned with technologies that clinicians are accustomed to using in their daily lives, so it was easy for them to quickly learn and adapt the system to their needs.”

#### **Joe Farr, RN**

Clinical Applications Coordinator  
King’s Daughters Medical Center

### “ IMPROVED CARE CONTINUITY

“The continuity of care with Expanse is great. From mom’s prenatal visits to baby’s checkups with their pediatrician, the entire care experience sees benefits.”

#### **Donna Laferriere, RN**

Clinical Informaticist  
Northeastern Vermont Regional Hospital
